IEEE Bombay Section
SKEP Programme

The IEEE Bombay Section comprises of a diverse group of industry, academic and research professionals and students, with a common interest in advances in technology and leveraging them for betterment of humanity. The section has conceived the Skill and Knowledge Enhancement Program (SKEP) during the year 2013. SKEP proposes talks, discussions and distinguished lectures with an intention to reach out to industry professionals, academia and society in general.

Main goals of SKEP include professional skills development, imparting technical expertise to develop viable applications, disseminating useful knowledge from current fields of interest to the beneficiaries and inculcating technical and logical thinking among the student community. SKEP sessions are conducted by invited experts on the state-of-the-art topics from among the research, academic and industrial areas. The intended audience are students, faculty, IEEE members and other interested persons from research, industry and academic institutions.

SKEP sessions are typically held in the lecture-cum-demonstration format and are intended to be highly interactive. The platform provided is expected to be a perfect avenue for industry-institute-academia interactions with ideas, opinions and visions being exchanged freely. Active participation of the audience during the sessions is highly desirable. They are usually of 2 hours in duration and are held on Saturday afternoons. The venues of SKEP programmes span colleges and other institutions spread over length and breadth of this Section's geography. Professionals are expected to benefit from continuing education and skill upgradation. In addition, this program seeks to motivate and inspire the young student community and endow them with a rare insight into what the industry has to offer and its expectations, thus helping them ease their entry into corporate life.

On what, where and when the SKEP sessions could be organised are almost entirely limited by the enthusiasm and active involvement of the IEEE Student Sections as well as heads or senior members of the academic, research and industrial units. Please write to dr.Satyanarayana.Bheesette@ieee.org today requesting a SKEP session in your organisation.
